

Task Force on Preoperative Fasting in Children Guidelines

Task Force for Preoperative Fasting in Children Guidelines

Aim

To produce evidence-based guidelines for preoperative fasting in children.

Progress report

A working group with members from six European and two North American countries has been formed. Seventeen PICOs have been defined, under six main headings:

1. Impact of fasting duration in a clinical or simulated fasting setting
2. Impact of co-morbidity, medication and other environmental factors in clinical or simulated fasting setting
3. Impact of composition, amount and consistence of food/fluid in clinical or simulated fasting setting, or other physiologic conditions
4. Validity or reliability of surrogate parameters
5. Identification of at risk patients
6. Impact of postoperative fasting duration in a clinical setting

The PICOs have been sent to the librarian, who has confirmed correct format, and the group is presently working on the results from the literature search. Once Literature will be selected according to the inclusion criteria, the task force will start grading the evidence and providing recommendations. The new guidelines should be ready by the end of 2020.

Composition

Chairpersons

Nicola Disma

Peter Frykholm

Members

<i>Core team members</i>		
Achim	Schmitz	Zürich
Robert	Sümpelmann	Hanover
Francis	Veyckemans	Lille
Alexander	Schmidt	Stanford
Daniel	Stocki	Tel Aviv
Paul	Stricker	Philadelphia

Mathilde	De Queiroz-Siqueria	Lyon
Mark	Thomas	London
Arash	Afshari	Copenhagen
<i>List of associated members</i>		
Hanna	Andersson	Uppsala
Fabian	Kuhn	Zürich
Anna	Klaucane	Uppsala
Lionel	Bouvet	Lyon
Eloise	Cercueil	Lyon
Rebecca	Isserman	Philadelphia
Elizabeth	Elliot	Philadelphia
Diana	Rudolph	Hannover
Jan	Hofmann	Aarau
Christiane	Beck	Hannover
David	Rosen	Ottawa
